

## microphone cables

Why is connectronics Musiflex different?  
What makes it a better microphone Cable?  
Why is it more flexible?

### MUSIFLEX

The best known Connectronics cable of all. **MUSIFLEX** is probably the most flexible microphone cable in the world, due to its conductive thermoplastic shielding. This versatile microphone cable remains soft and flexible over a wide temperature range and has justifiably become a pro audio industry standard for both live and recording applications.

As can be seen from the panel (right), unlike conventional microphone cable which has a lap screen that takes time and effort to terminate, **MUSIFLEX** may be stripped back in one easy action to reveal conductors and drain wire. This drain wire is easy to terminate and remains in contact with the bonded conductive thermoplastic shield to provide 100% screening.

**MUSIFLEX** can be terminated in just a fifth of the time taken to terminate ordinary lap screen cable, giving you a huge increase in productivity.

Available in Black, Blue, Brown, Green, Grey, Orange, Purple, Red, White and Yellow on 100M Reels. See our Specification Sheet for details.

### connectronics MICFLEX

### MICFLEX

Our famous high quality lap screen microphone cable. Not as flexible as **MUSIFLEX** but, for a conventionally screened mic cable, this just has to be the most flexible choice available.

**MICFLEX** is our conventional lap screen microphone cable and it is widely regarded as being more flexible than ordinary mic cable. **MICFLEX** has not only more, but also much finer strands than other mic cable, and an outer jacket made from specially formulated rubber-like soft PVC.

Available in Black on 100M Reels. See our Specification Sheet for details.

### connectronics MICFLEX 2020

### MICFLEX 2020

Our 'budget' microphone cable, **MICFLEX 2020** shares many of the benefits of its big brother, **MICFLEX**, whilst offering remarkable value for such a high quality cable. **2020** is the budget version of our **MICFLEX** conventional lap screen microphone cable.

Yes, it's a compromise, but it's fine for when cost is your prime concern. In short, **MICFLEX 2020** is cheap but, unlike most other cheap mic cable, it is definitely not nasty!

**MICFLEX 2020** proves that it is possible to deliver reasonable performance at modest cost.

Available in Black on 100M Reels. See our Specification Sheet for details.

### connectronics QUADFLEX

### QUADFLEX

The world's best and most effective double screen star quad mic cable for noisy environments. If there's ever any doubt in your mind that conventional mic cable may not be up to dealing with problems like thyristor noise, electro-mechanical interference or high levels of radio frequency interference, then **QUADFLEX** should be your first choice. It's the 'belt and braces' approach to mic cabling, providing optimum rejection of interference throughout long and short cable runs in electrically noisy environments. Four insulated tinned copper conductors are twisted together and surrounded by **QUADFLEX's** secret weapon - a double helical (Reusen) shield with the lap wound in opposing directions for optimum rejection capability. Ordinary star quad cable has a single screen - we believe this to be inadequate. You need **QUADFLEX**.

Available in Black on 100M Reels. See our Specification Sheet for details.

## digital & instrument cables

### connectronics DIGIFLEX

### DIGIFLEX

The reason you're recording digitally is to obtain and preserve the most accurate signal possible. Why then degrade your digital signal by passing it down an ordinary cable? This introduces noise which encourages digital 'jitter', or, in other words, inaccurately spaced digital bits. Jitter compromises both tonality and stereo image.

**DIGIFLEX** is designed for digital - it will preserve your precious digital audio signal and deliver jitter-free performance every time.

A very special signal carrier indeed.

Available in Black on 100M Reels. See our Specification Sheet for details.

### connectronics ROCKFLEX

### ROCKFLEX

Our latest specification single conductor cable is designed with the live and recording musician in mind.

**NEW ROCKFLEX** is our newest version of this model.

A super soft and flexible instrument cable for trouble-free coiling and its resistance to memory effect ensures that it uncoils superbly every time.

Available in Black on 100M Reels. See our Specification Sheet for details.
