MINIFLOW

"The most malleable installation cable there is.
So easy and pleasant to use."

MINIFLOW

From our **FLOW-Series**, **MINIFLOW** is a lightweight, foil shielded, single twisted pair cable for fixed installation work. When you're wiring a complex rack, or pulling a many-angled trunking run, the last thing you need is a cable that doesn't do as it's told - connectronics **MINIFLOW** cable is very well disciplined. To give you an easier life altogether.

MINIFLOW is a lightweight, foil-shielded, single twisted pair cable of small diameter designed for equipment wiring and fixed installation work. A foil-tape shield provides 100% coverage and is terminated by means of a drain wire to reduce installation time. It takes up very little room when used in trunking, and is perfect for rack installations when you're constructing your own loom.

Available in Black, Blue and Red on 100M Reels. See our Specifications Sheet for further details.

connectronics

STUDIFLEX

"What an efficient cable to work with!
So quick to terminate when you're under pressure."

STUDIFLEX • STUDIFLEX TJ

A single pair, conductive thermoplastic shielded studio installation cable.

STUDIFLEX is fast to work with and can help cut wiring time dramatically. Jacket and shield can be stripped in a single operation, exposing the pre-tinned conductors and drain wire.

STUDIFLEX is available in two versions: **Regular** and **TJ** for applications where a larger jacket is required (e.g. patch cords).

Available in Black, Blue and Red on 100M Reels. See our Specifications Sheet for further details.

multicore cables

ULTRAFLOW

ULTRAFLEX

We offer two popular models of multicore.

ULTRAFLEX is made up of multiple pre-jacketed, foil shielded pairs and is designed for medium and heavy duty on-the-road use and premium fixed installation.

ULTRAFLOW is our affordable foil shielded multicore for general purpose fixed installation and light duty road use.

ULTRAFLEX

People tell us **ULTRAFLEX** is the most flexible multicore they've used at this price point. A classic! Great for either road or install applications.

Essentially **ULTRAFLEX** is a range of foil screened cable made up of multiple miniature digital/mic pairs pre-jacketed within an outer jacket of matt black satin finish, ultra flexible PVC. Each pair is individually identified with numerals and characters in both directions along the entire length of the cable. A fifty per cent overlapping foil screen for each pair effectively produces a double shield for true 100% isolation. Our special multicore "recipe" ensures you will not find a more silky and flexible multicore cable at this price point - qualities that make **ULTRAFLEX** a joy to use.

ULTRAFLEX is available in 4, 8, 12, 16, 24 and 32-pair versions in Black. See our Specifications Sheet for further details.

ULTRAFLOW

Engineers tell us that they prefer the Connectronics **FLOW-Series** of installation cable because it is extremely malleable and generally more pleasant and easy to work with than ordinary installation cable. When you're wiring a complex rack, or pulling a many-angled trunking run, the last thing you need is a cable that doesn't do as it's told - Connectronics **FLOW-Series** cable is very well disciplined. To give you an altogether easier life.

ULTRAFLOW is a range of foil-shielded multipair cable designed for audio, instrumentation and data applications in fixed installation studio and sound reinforcement environments. Each pair is colour coded following the resistor colour code.

ULTRAFLOW is available in 2, 6, 12, 16, 20, and 32 pair versions in Black. See our Specifications Sheet for further details.
